A.1	A.1 SITING REQUIREMENTS – DISTANCE FROM PEOPLE	A.1 SITING REQUIREMENTS – DISTANCE FROM PEOPLE
A.1.1	A.1.1 NEW AND EXPANDED ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATIONS	A1.1 NEW ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATIONS
	A.1.1.1 NEW SITES  The minimum distances from occupancies for siting an anhydrous ammonia storage and handling operation certified under the Ammonia Code of Practice on or after January 1, 2011 are (refer to Figures in the User Guide):  (a) 1.5 kilometers from the border of a City, Town, Village or Hamlet, or from Evacuation-Sensitive facilities such as hospitals, schools, residential developments or senior citizens homes; and	The minimum distances from occupancies for siting an anhydrous ammonia storage and handling operation certified under the Ammonia Code of Practice on or after January 1, 2011 are:  (a) 1.5 Kilometers from the border of a city, town, village or hamlet, or from evacuation-sensitive facilities such as hospitals, schools, residential developments or senior citizens homes; and  (b) 500 meters from any occupancy (e.g. a rural residence or a small business; and

- (b) 500 meters from <u>any</u> occupancy (e.g. a rural residence or a small business, occupancy is defined in Section A1 of the User Guide); <u>and</u>
- (c) 50 meters from an environmentally sensitive area (lake, stream, wetland etc.); and

Approval from the local authority having jurisdiction is also required.

Compliance will be indicated by documentation such as dated facility plans demonstrating the required distances, and local authority approval documentation.

Recommended Best Practices: Locate new anhydrous ammonia storage and handling operations a minimum of 3.0 kilometers from the boundary of a city, town, village, hamlet or evacuation sensitive facilities.

A.1.1.1 Audit Requirements	Y/N
Meets or exceeds Minimum Distance from community	
Meets or exceeds Minimum Distance from residence	
Meets or exceeds Minimum Distance from environmentally sensitive areas	
Documentation showing approval from local authority	
Meets Best Practices Requirements – Anhydrous ammonia operations are over 3 km from the boundary of a city, town, village, hamlet or evacuation sensitive facilities	
Comments	1

#### A.1.1.1 EXPANSION AT EXISTING SITES

Capacity expansion at existing certified ammonia sites that are within the setback distances outlined in A.1.1.1 (grandfathered or municipally encroached sites) will require

(c) 50 meters from an environmentally sensitive area (lake, stream, wetland etc.); <u>and</u>

Approval from the local authority having jurisdiction is also required.

Compliance will be indicated by documentation such as dated facility plans demonstrating the required distances, and local authority approval documentation.

The recommended best practice is to locate new anhydrous ammonia storage and handling operations a minimum of 3.0 kilometres from the boundary of a city, town, village, hamlet or evacuation-sensitive facilities.

- a) Preapproval by Fertilizer Canada
- b) Equipment and measures as outlined in the Anhydrous Ammonia Code of Practice Renovation Policy
- c) Approval from the local authority having jurisdiction

Compliance will be indicated by documentation such as dated facility plans and approvals demonstrating the required equipment, and local authority approval documentation.

A.1.1.2 Audit Requirements	Y/N
Preapproval Documentation	
Documentation showing approval from local authority	
Meets equipment and best practice requirements as specified in the Anhydrous Ammonia Code of Practice Renovation Policy	
Comments	<u> </u>

# A.1.2 ALL OPERATIONS LESS THAN 500 METRES FROM POPULATION CONCENTRATIONS OR LESS THAN 100 METRES FROM ANY OCCUPANCY

All anhydrous ammonia storage and handling operations located less than 500 metres from the boundary of a city, town, village, hamlet or from an evacuation-sensitive facility (e.g. hospital, school or senior citizens home), or less than 100 metres from any occupancy (e.g. rural residence).

In order to minimize the risk to people from an accidental release of anhydrous ammonia, the following measures are required:

(a) Where loading and unloading is conducted at the operation, pull-away protection shall be installed on liquid and vapour hose connections (both in load and out load).

# A1.2 ALL OPERATIONS LESS THAN 500 METRES FROM POPULATION CONCENTRATIONS OR LESS THAN 100 METRES FROM ANY OCCUPANCY

All anhydrous ammonia storage and handling operations located less than 500 metres from the boundary of a city, town, village, hamlet or from an evacuation-sensitive facility (e.g. hospital, school or senior citizens home), or less than 100 metres from any occupancy (e.g. rural residence):

In order to minimize the risk to people from an accidental release of anhydrous ammonia, the following measures are required:

(a) Where loading and unloading is conducted at the operation, pull-away protection shall be installed on liquid hose connections (both in load and out load).

All sites are required to have pull-away protection installed on both liquid and vapour hose connections (both in load and out load).

Compliance will be indicated by inspection of the equipment and demonstration of functionality.

A.1.2 Audit Requirements	Y/N
Pull-away protection installed (in load and out load)	
Comments	

All sites are required to have pull-away protection installed on both liquid and vapour hose connections (both in load and out load)

Compliance will be indicated by inspection of the equipment and demonstration of functionality.

- (b) Additional security precautions shall be installed at the operation including:
  - If fencing is in place, all fencing must be topped by three strands of barbed wire.;

AND

Some form of security lighting

Compliance will be indicated by inspection of the equipment and demonstration of functionality

## A.1.3 **COMMUNICATION WITH LOCAL PEOPLE**

This protocol applies to all ammonia operations covered by Section A of this Anhydrous Ammonia Code.

To ensure that members of the public located near ammonia operations are adequately informed and aware of emergency procedure, the following measures are required:

- (a) Annual contact with people within 3.0 kilometers:
  - Communication must inform people of the presence of an ammonia operation, and the communication process to be used in the event of an emergency.
  - Communication shall be in writing.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

- (b) Annual contact with people within 1.5 kilometers:
  - Communication must include information on the nature and hazards of ammonia.
  - Communication must include information on basic emergency response procedures

### A1.3 COMMUNICATION WITH LOCAL PEOPLE

This protocol applies to all ammonia operations covered by Section A of this Code.

To ensure that members of the public located near ammonia operations are adequately informed and aware of emergency procedure, the following measures are required:

- (a) Annual contact with people within 3.0 kilometers:
  - Communication must inform people of the presence of an ammonia operation, and the communication process to be used in the event of an emergency.
  - · Communication shall be in writing.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

- (b) Annual contact with people within 1.5 kilometers:
  - Communication must include information on the nature and hazards of ammonia.
  - Communication must include information on basic emergency response procedures including contact

including contact numbers, and both shelter-inplace and evacuation procedures.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

- (c) Review of emergency response plan with people within 500 metres:
  - Local people within 500 metres must be invited annually to a review session of the emergency response plan as it applies to those people.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

A.1.3 Audit Requirements	Y/N
Dated copies of communication showing people within 3.0 km were informed of the presence of an ammonia operation and the communication to be used in the event of an emergency	
Dated copies of communication showing people within 1.5 km were informed on the nature and hazards of ammonia and on basic emergency response procedures	
Communications included all local stakeholders (within 3.0 and 1.5 km)	
List of stakeholders within 500 m that were invited to attend the annual review of the emergency response plan and copies of written materials presented	
Comments	

numbers, and both shelter-in-place and evacuation procedures.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

- (c) Review of emergency response plan with people within 500 metres:
  - Local people within 500 metres must be invited annually to a review session of the emergency response plan as it applies to those people.

Compliance will be indicated by inspection of the list of local stakeholders and dated copies of the required written materials.

# A2 DISTANCE FROM ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATION TO ROADWAY OR RAILWAY

A2

The anhydrous ammonia storage and handling operation complies with the setback distances as prescribed by Provincial

# A2 DISTANCE FROM ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATION TO ROADWAY OR RAILWAY

The anhydrous ammonia storage and handling operation complies with the setback distances as prescribed by Provincial or

or Federal regulations. Consult Federal and/or Provincial regulations regarding setback distances.

Compliance will be indicated by an appropriate licence or permit from the authority having jurisdiction or evidence of compliance presented by the Owner / Operator or person responsible (refer to the User Guide for examples of acceptable evidence).

A.2 Audit Requirements	Y/N
Current licence from the authority having jurisdiction or evidence of compliance presented by the Owner / Operator or person responsible	
Comments	I

Federal regulations. Consult Federal and/or Provincial regulations regarding setback distances.

Compliance will be indicated by an appropriate licence or permit from the authority having jurisdiction or evidence of compliance presented by the <a href="https://example.com/www.example.co

# A3 DISTANCE FROM ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATIONS TO ENVIRONMENTALLY SENSITIVE AREAS

Anhydrous ammonia operations must have measures in place to prevent contamination of environmentally sensitive areas such as rivers, lakes, streams and wetlands.

If the anhydrous ammonia storage and handling operation is located closer than 100 meters from environmentally sensitive areas, means of containment must be present to control and contain emergency run-off water. This may be achieved by utilizing sandbags to plug a culvert in a drainage ditch around the operation in emergency situations.

Compliance will be indicated by the examination of a runoff containment plan.

A.3 Audit Requirements (for sites within 100 m of an environmentally sensitive area)	Y/N
If yes: There is a means of containment present to control and contain emergency run-off water	
Comments	

# A3 DISTANCE FROM ANHYDROUS AMMONIA STORAGE AND HANDLING OPERATIONS TO ENVIRONMENTALLY SENSITIVE AREAS.

Anhydrous ammonia operations must have measures in place to prevent contamination of environmentally sensitive areas such as rivers, lakes, streams and wetlands.

If the anhydrous ammonia storage and handling operation is located closer than 100 meters from environmentally sensitive areas, means of containment must be present to control and contain emergency run-off water. This may be achieved by utilizing sand bags to plug a culvert in a drainage ditch around the operation in emergency situations.

Compliance will be indicated by the examination of a runoff containment plan.

The anhydrous ammonia storage and handling operation	<u> </u>
complies with the applicable requirements of the site security protocol.	The anhydrous ammonia storage and handling operation complies with the applicable requirements of the site security protocol.
A.4.1 Anhydrous Ammonia Storage and Handling Security Fencing:  The anhydrous ammonia storage and handling operation must incorporate measures to prevent unauthorized access to the product.  All ammonia pressure vessels (stationary and/or mobile) and piping systems are secured within a security fence with lockable security gates. The minimum requirements for fencing of new sites, commissioned after January 1, 2019, is 6' chain link with a barbed wire top. Existing ammonia Code-compliant sites using fencing, as the primary means of site security / compliance with this Protocol, can continue to use either a 5-foot wire fence topped with three-strand barb wire or 6-foot chain link, with or without three strands of barbed wire.  Compliance will be indicated through site inspection to verify the presence of required security measures.  A.4.1 Audit Requirements  Security fencing and lockable gates in place  Site commissioned before January 1, 2019 – has 5-foot wire fencing with three-strand barbed wire or 6-foot chain link fencing with or without three strands of barbed wire.  Site commissioned after January 1, 2019 – has 6-foot chain link fencing with a barbed wire top  All vessels containing products are stored within the fenced area  Comments	A4.1  The anhydrous ammonia storage and handling operation must incorporate measures to prevent unauthorized access to the product. Acceptance measures include one or more of the following:  Fencing — Ammonia equipment is secured within a security fence and lockable security gates.  Minimum height for fencing is 6 feet. Fencing can be either 5-foot wire fence topped with three-strand barb wire or 6-foot chain link, with or without three strands of barbed wire.  — OR  Valve and Tank Securement — All liquid valves that provide primary access to anhydrous ammonia as a means of containment have been physically secured with a valve lock. There must also be physical measures taken to prevent unauthorized removal of portable anhydrous ammonia storage vessels:  — OR—  Other Physical Means of Security — Other acceptable means of security include intrusion detection systems, security presence or surveillance. There must also be physical measures taken to prevent unauthorized removal of portable anhydrous ammonia vessels.  Compliance will be indicated through site inspection to verify the presence of required security measures.

A4.2	Unattended sites must be inspected every two weeks while		A4.2			
			Unattended sites must be inspected every two weeks while unattended.

A6	A6 EMERGENCY EXITS		A6 EMERGENCY EGRESS			
			The storage vessel area is constructed in a manner to provide adequate emergency egress for personnel in case of a release.			
	If the storage vessel is enclosed within a security fence, ther must be at least two escape exits located to provide options	A6-Fences If the storage vessel is enclosed within a security fence, there must be at least two escape exits located to provide options for				

escape regardless of wind direction. An exit route with a minimum width of one (1) metre leading to exits in the fence must be functional and kept clear of obstructions at all time. The main gate may function as one of these exits.

Compliance will be indicated through a visual inspection of the means of emergency exit.

A.6 Audit Requirements			
Two escape exits each at least 1 m width provide options for escape from within security fence around storage vessel(s) regardless of wind direction.			
Exits are clear of obstructions and are tested to be functional.			
Comments			

escape regardless of wind direction. An exit route with a minimum width of 1 metre leading to exits in the fence must be kept clear at all time. The main gate may function as one of these exits.

Compliance will be indicated through a visual inspection of the means of emergency egress

## A7 **A7 FACILITY SIGNAGE**

The anhydrous ammonia storage and handling operation is equipped with required warnings and emergency response signage.

The following information must be located at the entrance to the site:

- A7.1 Caution/Danger Anhydrous Ammonia
- A7.2 Authorized Personnel Only
- A7.3 No Smoking or Open Flames (both statements or both pictograms are required)
- A7.4 After hours and daytime emergency contact numbers including company and emergency services
- A7.5 Signs must be equipped with letters on a contrasting background that makes the sign legible to approaching emergency services.

Compliance will be indicated through a visual inspection of the signage.

## A7 FACILITY SIGNAGE

The anhydrous ammonia storage and handling operation is equipped with required warnings and emergency response signage.

## **A7 Minimum Requirements**

	The anhydrous ammonia transport vessel is equipped with the required emergency and personal protective equipment.	The anhydrous ammonia transport vessel is equipped with the required emergency equipment.
	(a) Each transport vehicle must have the following:	C6 Minimum Requirements
	C6.1 First Aid kit	(a) Each transport vehicle must have the following:  C6.1 First Aid kit
	C6.2 At minimum, 3A 10BC (5 lb) fire extinguisher with nozzle	C6.2 At minimum, 3A 10BC (5 lb) fire extinguisher with nozzle.
	C6.3 Minimum of 20 liters (5 gallons) of clean, fresh emergency water	C6.3 Minimum of 20 liters (5 gallons) of clean, fresh emergency water.
	C6.4 Roadside emergency kit	C6.4 Road side emergency kit.
	C6.5 Communication device (e.g. cell phone or two-way radio)	C6.5 Communication device (e.g. cell phone or two-way radio)
	(b) Each transport operator must be supplied their own Personal Protective Equipment (PPE) as follows and be instructed on its use, limitations, inspection, and maintenance.	(b) Each transport operator must be equipped and instructed on the proper use of the following personal protective equipment:
	C6.6 Full-face cartridge style respirator complete with extra cartridges  C6.7 One- or two-piece anhydrous ammonia resistant suit (for example, neoprene)	C6.6 One full-face respirator complete with spare cartridge/canister.
		C6.7 One-or two-piece anhydrous ammonia resistant suit.
		C6.8 Gauntlet style anhydrous ammonia resistant gloves.
	C6.8 Gauntlet style anhydrous ammonia resistant gloves (for example, neoprene)	C6.9 CSA approved safety boots with a minimum six inch upper.
	C6.9 CSA approved safety boot with a minimum six inch upper	C6.10 Individual water bottle with clean, fresh water.
	C.6.10 Individual emergency water bottle filled with clean, fresh water	Compliance will be indicated through a visual inspection of personal protective equipment to ensure proper type and-quantity for personnel operating the transport vessel.

- (c) Transport Operators are required to wear PPE when handling, transferring and or repairing equipment that has potential for ammonia release that could cause injury from anhydrous ammonia. PPE is required to be worn
  - Any time a valve is being actuated (being turned on or off)
  - When a hose is being handled
  - When performing a connection or disconnection and/or performing any bleed down of connections
  - When troubleshooting or conducting maintenance operations on pressurized or potentially pressurized equipment such as meters or flow meters on application equipment.

(Note: After connection and while filling there is no requirement for the operator to be fully dressed, for example while monitoring the transferring process, completing an inspection of the unit being filled, or updating documentation.)

Compliance will be indicated through a visual inspection of transport vehicle emergency equipment and transport operator personal protective equipment and actions to ensure proper type, quantity, and usage of PPE.

C.6 Audit Requirements	Y/N
Each transport vehicle has at a minimum the following emergency response equipment: First Aid kit, 3A 10BC 5 lb fire extinguisher, 20 L (5 gallons) clean water, road-side emergency kit, and a communication device (Items C6.1-C6.5).	
PPE as specified in Section C6.6 - C6.10 (Full-face respirator, spare respirator cartridge/cannister, anhydrous ammonia resistant suit, anhydrous ammonia resistant gauntlet gloves, CSA approved safety boots with a minimum 6" upper, and a water bottle containing clean, fresh water).	

	Full PPE worn when valves being turned on or off; during connections/disconnections or connection bleed downs; and when conducting maintenance operations on pressurized or potentially pressurized equipment.  Comments	
C.7	C.7TRANSPORT VEHICLE CERTIFICATION	C7 TRANSPORT VEHICLE CERTIFICATION
	Commercial licenced vehicles transporting anhydrous ammonia requiring Commercial Vehicle Safety Alliance (CVSA) inspection must have current certification. Other vehicles must pass an annual safety inspection.	C7 Certain licenced vehicles transporting anhydrous ammonia must pass an annual Commercial Vehicle Safety Alliance (CVSA) inspection. Other vehicles must pass an annual safety inspection.
	Compliance will be indicated through an examination of the current CVSA safety sticker on vehicles or trailers requiring that inspection and maintenance records that indicate that other vehicles transporting anhydrous ammonia at the operation and not requiring CVSA certification have passed a current annual safety inspection.	Compliance will be indicated through an examination of the current CVSA safety sticker on vehicles or trailers requiring that inspection and maintenance records that indicate that other vehicles transporting anhydrous ammonia at the operation have passed an annual safety inspection.
	C.7 Audit Requirements Y/N	
	Commercial licenced vehicles transporting anhydrous ammonia have current Commercial Vehicle Safety Alliance (CVSA) certification as required.	
	Based on maintenance records vehicles transporting anhydrous ammonia and not requiring CVSA certification have passed a current annual safety inspection.

C.8	C.8SECURITY FOR ANHYDROUS AMMONIA TRANSPORT VESSELS	C8 SECURITY FOR ANHYDROUS AMMONIA TRANSPORT VESSELS
	The anhydrous ammonia transport vessel is secured in accordance with the security protocol.	The anhydrous ammonia transport vessel is secured in accordance with the security protocol.
	All transport vessels at the anhydrous ammonia operation comply with the following measures to prevent unauthorized access to the product:	C8 Transport Vessel Security Protocol

## **C8.1 Securing While in Transport**

Drivers responsible for the transportation of anhydrous ammonia can stop for short break periods (less than one (1) hour). However, main access valves on anhydrous ammonia transport vessels must be secured if the driver is out of visual contact with the vessel for more than 30 minutes.

## **C8.2** Parking Near Evacuation-Sensitive Occupancies

Anhydrous ammonia transport vessels must not be parked within 500 metres of high occupancy facilities such as hospitals, schools, shopping malls, daycare centres and senior care homes, unless the vessel has been emptied and de-pressured.

### **C8.3** Off-site storage of Transport Vessels

In addition to the requirements defined in C8.2 in this section, transport vessels cannot be stored, other than for maintenance periods not exceeding 72 hours, within city or town limits unless at an Ammonia Code compliant site, or the vessels have been emptied and de-pressurized.

#### C8.4 Mobile Ammonia Vessels

Delivery units must be stored at a certified site within a locked, fenced area that complies with the Code fencing requirements (see Section A.4.1) or they have been emptied and de-pressurized. Storing vessels inside a roofed structure is prohibited unless the vessel has been emptied and depressurized.

Compliance will be indicated by examination of a signed and dated standard operating procedures.

C.8 Audit Requirements		
All transport vessels at the anhydrous ammonia operation comply with the following measures to prevent unauthorized access to the product:		
C.8.1 - Securing while in transport,		
C.8.2 - Parking near evacuation-sensitive occupancies,		

All transport vessels at the anhydrous ammonia operation comply with the following measures to prevent unauthorized access to the product:

- C8.1 **Securing While in Transport** Drivers responsible for the transportation of anhydrous ammonia can stop for short break periods (less than 1 hour). However, main access valves on anhydrous ammonia transport vessels will have to be secured if the driver is out of visual contact with the vessel for more than 30 minutes.
- C8.2 Parking Near Evacuation-Sensitive Occupancies –
  Anhydrous ammonia transport vessels must not be parked within 500 metres of high occupancy facilities such as hospitals, schools, shopping malls, daycare centres and senior care homes, unless the vessel has been emptied and de-pressured.
- C8.3 **Off-site storage of Transport Vessels** In addition to the requirements defined in C9.2 in this section, transport vessels cannot be stored, other than for maintenance periods not exceeding 72 hours, within city or town limits unless at a Code-compliant site, or the vessels have been emptied and de-pressurized.
- C8.4 Mobile ammonia vessels must have liquid valves secured while they are in storage unless they are stored inside a locked, fenced compound that complies with the Code fencing requirements (see Site Security Section) or they have been emptied and de pressured. Storing vessels inside a closed structure is prohibited unless the vessel has been emptied and depressurized.

Compliance will be indicated by examination of a signed and dated standard operating procedures or training records.

SECTION C - Part 2	C.8.3 - Off-site storage of transport vessels, C.8.4 - Mobile ammonia vessels must be stored at a certified site within a fenced area when pressurized.  There is proof of signed and dated standard operating procedures.  Comments  SECTION C - PART 2: APPLICATION EQUIPMENT  For the purposes of this section, the following equipment must comply with the standards defined in this section:  Nurse or Applicator Tank - nurse tanks or applicator tanks ar anhydrous ammonia tanks that are mounted on a farm wagon of agricultural implement and are designed to be used in the field applying anhydrous ammonia. This section applies only to nurse or applicator tanks.	for Nurse or Applicator Tank purse tanks or applicator tanks are

C.14	C.14 NURSE AND APPLICATOR TANK TOW VEHICLE REQUIREMENTS  All vehicles used for towing anhydrous ammonia nurse wagons to and from the point of application of the product must meet	C14 TOW VEHICLE REQUIREMENTS  All vehicles used for towing anhydrous ammonia nurse wagons to and from the point of application of the product must meet

minimum capacity requirements in accordance with the size of nurse tank they are towing.

In addition to regulatory requirements, tow vehicles used for transporting anhydrous ammonia nurse wagons must be rated for the size and weight of the nurse tank they are towing. Refer to requirements specified in the applicable Highway Traffic Act.

Commercial licenced vehicles transporting anhydrous ammonia requiring Commercial Vehicle Safety Alliance (CVSA) inspection must have current certification. Other vehicles must pass an annual safety inspection.

Compliance will be indicated through a signed and dated requirements list/letter from the current Owner / Operator or person responsible indicating that all tow vehicles have met minimum requirements in accordance with the size of the nurse tank they are towing, or through inspection of corporate policies/training records.

Compliance will be indicated through a visual examination of the current CVSA safety sticker on commercially licenced vehicles transporting ammonia and through documentary evidence of inspection and maintenance records to indicate that other vehicles transporting anhydrous ammonia at the operation and not requiring CVSA certification have passed a current annual safety inspection.

C.14 Audit Requirements	Y/N

			G5 Minimum Requirements

The emergency response plan for the anhydrous ammonia operation has been reviewed, had its contents verified and updated within the past 12 months.

Compliance will be indicated through examination of the emergency response plan to verify that the last review date has not exceeded 12 months.

G.5 Audit Requirements	Y/N
The emergency response plan for the anhydrous ammonia operation has been reviewed and had its contents verified and updated within the past 12 months.	
Comments	

The emergency response plan for the anhydrous ammonia operation has been reviewed, had its contents verified and updated within the past 12 months.

Compliance will be indicated through examination of the emergency response plan to verify that the last review date has not exceeded 12 months.

#### G.6 G.6 EMERGENCY CONTACTS LIST

A current list of emergency contact numbers for local emergency responders, operation management and employees has been prepared and is located at:

All land line phones throughout the Site.

Compliance will be indicated through examination of the posted emergency response contact list at the operation.

• Each vehicle that transports anhydrous ammonia.

Compliance will be indicated through examination of the emergency response contact list in each anhydrous ammonia transport vehicle.

Within the last 12 months the emergency contacts phone lists have been verified and updated.

Compliance will be indicated by examination of emergency contact lists.

G.6 Audit Requirements	Y/N
