

Sustainable Hydrogen & Ammonia Forum

Fertilizer Canada and the Chemistry Industry Association of Canada (CIAC) are hosting a virtual multi-session Sustainable Hydrogen & Ammonia Forum this September 2022.

Sustainable hydrogen & ammonia have the potential to help Canada meet its net-zero climate goals, but a global transition to hydrogen & ammonia as a sustainable energy source or fuel will take collaboration between government and industry, new or expanded infrastructure and technology advancements.

Join a variety of experts from industry and government as we discuss the opportunities and challenges associated with sustainable hydrogen & ammonia production, transportation, export, and consumption.

**REGISTRATION OPEN
SOON**
